## Abstract

The Athena Community Office has been supporting the ESA's Athena Science Study Team and the broad Athena scientific community since June 2016. Currently, the community counts more than 1000 researchers spread around the world.

In this talk, we will present some of the most relevant projects carried out in the last two years, such as: supporting the production of the multimessenger-Athena and Rubin-Athena white papers; coordinating the Athena science monthly webinars; developing simulation software; assisting members of the community and other astronomers in performing science simulations; and last but not least keeping the development of communication and outreach activities openly distributed to the astronomical community.

## Acknowledgments

ACO activities are being funded by project RTI2018-096686-B-C21 funded by MCIN/AEI/10.13039/501100011033 and by "ERDF A way of making Europe".
